

ABSTRACT

[00054] Disclosed are a digital camera and methods for managing images captured by the digital camera. A method implemented by a digital camera, comprising the steps of receiving a first user input corresponding to an image displayed by a digital camera; converting a first set of data corresponding to the image to a second set of data responsive to the first user input, wherein the second set of data is smaller than the first set of data; and storing the second set of data in non-volatile memory.
